

Voter Turnout and Median Age - 2010 Election

Percent Turnout of Registered Voters by Ward Precinct

Above: This map depicts the percentage of registered voters who cast ballots in the November 2010 election, broken down by Ward Precinct. Turnout numbers range from 10% in Ward 1, Precinct 2 (Central Campus area), to 47.3% in Ward 4, Precinct 7 (Dickens neighborhood).

Right: This map depicts the median age of residents by Census Block Group according to the 2000 Census, overlaid with the percentage of registered voters casting ballots in the November 2010 election from the map above.

We can see with this overlay that every precinct with less than 19% voter turnout correlates heavily with block groups with median age of under 25. Conversely, ten of the fifteen block groups with a median age greater than 41.5 fall within a precinct in the highest voter turnout range.
